

# Fully Self Aware Servers

## Self-Aware Servers

Voxida has been called a health nut. We're okay with that. As parents of the proven solution for mission critical call recording, we've made sure that Voxida sees that a little self-examination can be a good thing.

Voxida is known for its unparalleled reliability and ability to communicate essential, real time diagnostics, ensuring ongoing call center operations. Voxida's scalable hand-assembled systems employ fully fault tolerant, industrial grade hardware and are optimally ruggedized with full vibration and shock mounting of components. Plus, Voxida pays attention.

## Do You Value a Long Life?

So does Voxida. Health conscious, some would even say fanatical, Voxida focuses on her well being through enhanced, self-aware monitoring systems. Voxida immediately notifies administrators if there's an alert condition through audible and visual alarms and by sending out messages to those in charge.

## Why Never is Great

Our systems have never had a complete, center crippling failure. In the rare case that you have a minor component failure, we keep you operational. We are happy to report that Voxida has never died in the field. Immortality? We sure hope so.

Plus, we keep it hot and easy. Critical components are generally hot or easy swap and any alarm situation can generally be remedied in the field in less than 10 minutes.

## Hardware - for the Long Haul

At Accurate Always, we offer fully tested hardware for leading reliability. The latest? We champion our hot-swap, state-of-the-art, RAID-5 host independent subsystem, for the closest thing to bulletproof data integrity. System failures - en garde!

Afraid of commitment? Not us. Accurate strives for meaningful, long-term relationships. We are more interested in keeping you operational, post-purchase, than basking in our profits. If you have a problem, we're on it. Always.
